

# Molded Handlebar

## Benefits

No potentiometer to center

Proven durability - rigorously field tested by customers

Better control over speed and steering

Larger safety stop button

If you need to replace the cartridge and/or the safety stop button on the Molded Handlebar, it's easily changed out. It's a plug'n'play process that takes less than 5 minutes (including taking it apart and putting it back together).

As of April 30, 2025, this option is available for all units except AircraftCaddy units, tube frame units that don't have WagonWheel steering, TrailerCaddy Terminal Tractors, and units have have the Service Brake option.
